FOR SANLAMALLIANZ GENERAL INSURANCE RWANDA · MOTOR UNDERWRITING AND CLAIMS

Your motor book, segment by segment, in one morning.

Before the motor review is settled: which segments need a higher premium, which do not, and which claims deserve a second look.

WHY NOW On 12 Oct 2026 the insurers' association chair said the motor third-party increase "could be around 20–30 per cent" and is still under review with the Ministry of Finance and BNR. Repair costs have more than doubled in four to five years, while tariffs have not moved in at least five.

WHAT YOU LEAVE WITH

1

Loss ratio by segment

By vehicle type, use and age, with frequency, average claim and the number of policies behind each figure.

2

The premium change each segment needs

To reach your own target loss ratio: the evidence for a segment-by-segment ask instead of one flat number.

3

Claims to look at twice

Early, late, duplicate, repeat and outlier-provider flags, what they are worth and which provider to audit first.

WHAT THE RESULT LOOKS LIKE

Segments ranked by loss ratio

Vehicle type and use; a rate change is shown for segments with 30 or more policies

SEGMENT	POLICIES	PREMIUM	CLAIMS	LOSS RATIO	FREQ.	CHANGE
Motorcycle · Public transport	585	RWF 74.0M	RWF 97.0M	131.1%	0.48	+119%
Minibus · Public transport	230	RWF 282.2M	RWF 343.1M	121.6%	0.39	+103%
Car · Public transport	25	RWF 14.9M	RWF 13.8M	92.9%	0.22	too few

Motor Loss Ratio Lens · illustrative sample, not your data

HOW THE MORNING WORKS

1. **Your analyst exports** motor policies and claims (Excel or CSV).
2. **Runs the two checks on your laptop**, with me beside them.
3. **You keep the results** and a one-page summary. Nothing is sent to me.

Data protection

Under Law No 058/2021, an outside party that processes personal data for you must itself be registered with NCSA (art. 29). Here nothing leaves your systems: the checks run in your browser and mask personal numbers on sight.

An idea for the tariff talks

Take the segment table to the discussion with the association and BNR. A separate, evidenced ask per segment is easier to approve than one flat increase, and it keeps low-claim drivers from paying for high-claim ones.

RWF 500,000

Fixed price, one morning at your office, invoice after delivery.
It pays for itself if it corrects pricing by 1% on RWF 50M of motor premium.
